### 2. Investment Policy & Objective

### **Investment Objective**

The investment objective of the Fund is to achieve capital appreciation over capital preservation during the full investment cycle. The Fund is ideally suited to investors with a high risk tolerance and an investment horizon of 5 years or longer.

### **Investment Policy**

The Fund intends to achieve its investment objective through a diversified global portfolio primarily consisting of investments in participatory interests of portfolios of collective investment schemes or other similar schemes. The Fund will invest in participatory interests of underlying portfolios which provide exposure to a wide range of asset classes including but not limited to cash and/or money market instruments, bonds, international equities, property and commodities. The Fund may also invest in participatory interests of underlying asset allocation portfolios which provide exposure to a combination of the asset classes. The Fund may also invest in transferable securities. The portfolio has flexibility in terms of currencies and asset allocation both between and within asset classes, countries and regions.

The Fund may invest in the units of collective investment schemes which are also managed by the Manager or an associate of the Manager. Neither the Manager nor any such associated company shall be liable to account to investors for any profit, charges or remuneration made or received by the Manager or any such associated company and the Manager's fee shall not be abated thereby.

The Fund may invest in forward foreign currency exchange contracts for hedging purposes.

### **Portfolio Analysis**

During the quarter, the fund manager has continued to manage the portfolio in accordance with the objective and policy stated above.

<sup>&</sup>lt;sup>1</sup>Inception date May 2006

Source: Morningstar, Lipper Hindsight, Northern Trust International Fund Administration Services (Guernsey) Limited. Past performance is not indicative of future returns. The fund performance is calculated on a total return basis, net of all fees and in US dollar terms. NAV to NAV figures have been used for the performance calculations. The performance is calculated for the Fund. The individual investor performance may differ, as a result of various factors, including the actual investment date. Investment performance calculations are available for verification upon request. Annualised returns are period returns re-scaled to a period of 1 year. This allows investors to compare returns of different assets that they have owned for different lengths of time. Actual annual figures are available to investors request. The global equity (MSCI AC World from 1 August 2011, MSCI World prior to 1 August 2011), global fixed income (Citi WorldBIG) and cash (LIBOR USD 7-Day from 1 August 2011, LIBID USD 7-Day prior to 1 August 2011) returns shown are those of the three components of the fund's benchmark. Peer group median: Morningstar USD Aggressive Allocation. *Past performance is not indicative of future returns.*

### 4. Total Expense Ratio

The Total Expense Ratio (TER) is a measure of the total costs associated with managing and operating an investment fund. These costs consist primarily of management fees, custody fees, administration fees plus additional expenses such as trading fees, legal fees, auditor fees and other operational expenses. The total cost of the Fund is divided by the Fund's total assets to arrive at a percentage amount, which represents the TER.

The size of the TER is important to investors, as the costs come out of the Fund, affecting investors' returns. For example, if a Fund generates a return of 5% for the year but has a TER of 2%, the 5% gain is diminished (to roughly 3%).

The TER of this Fund at the end of the quarter was;

Share Class A*	
	1.73%
Share Class B**	
	1.53%

A schedule of fees can be found in the Fund's scheme particulars and Minimum Disclosure Document, which can be obtained from the Manger's website

<sup>\*</sup> TER: 1.73% - The FGAM Global Growth Fund USD Class A has a Total Expense Ratio (TER) of 1.73%. The TER to 30 September 2020 is based on data for the period 30 September 2020 to 30 September 2020, 1.73% of the Net Asset Value of the portfolio was incurred as charges, levies and fees related to the management of the portfolio. The ratio does not include transaction costs. A higher TER ratio does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER can not be regarded as an indication of future TERs.

<sup>\*\*</sup> TER: 1.53% - The FGAM Global Growth Fund USD Class B has a Total Expense Ratio (TER) of 1.53%. As at 30 September 2020, 1.53% of the Net Asset Value of the portfolio was incurred as charges, levies and fees related to the management of the portfolio. The ratio does not include transaction costs. A higher TER ratio does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER can not be regarded as an indication of future TERs.

### 5. Portfolio Commentary

Markets continued to rally in the third quarter, with global equities adding 8.1% in US dollar terms to take them into positive territory for the year. Global bonds also posted positive returns, up 2.5% over the quarter and 6.1% year to date, although returns in Q3 were driven primarily by currency gains, as the euro, pound and yen all appreciated sharply against the US dollar. Markets pulled back towards the end of the quarter, with global equities declining 3.5% in September, as tighter restrictions were reintroduced in parts of Europe following a rise in coronavirus cases. Equities have re-joined their upward path as at the time of writing, seemingly in anticipation of a Democrat win in the US elections, which therefore increases the chances of a large additional fiscal package.

The Fund's underlying equity managers performed well during the quarter, driving the bulk of the returns. Emerging Markets rallied in the weaker dollar environment, with Sands and Fidelity delivering exceptionally strong returns. Elsewhere, growth managers did well generally including Jennison and Rainier, and while value lagged at the index level, Contrarius nonetheless outperformed following sharp rebounds in several of their retail holdings. From a sector perspective, the established trend of information technology and consumer brands outperforming continued unabated. Energy was the notable underperformer, down 17%, as the rebound in oil prices lost momentum.

Within bond markets, Muzinich benefitted from the rally in Emerging Markets as spreads contracted. The increase in market implied inflation expectations was also a positive to our positions in commodities and real assets, both of which are well suited to such an environment.

Equity markets have come back a long way since bottoming in March, but in reality they have been driven by a small number of large technology companies. If you strip out the FAANG stocks (Facebook, Apple, Amazon, Netflix and Google/Alphabet) from the S&P 500 Index, the rest of the US market index is down approximately 10% year to date and most other major markets, with the exception of China and Japan, are currently sitting on similar losses. Meanwhile economies are in reasonable shape, with data continuing to surpass what turn out to have been pessimistic expectations. Even as tighter restrictions are being reintroduced in much of Europe and some parts of the US, policymakers stand ready to do more, both in terms of central bank liquidity and also government spending. Hence we think today's entry point is reasonable, notwithstanding some short term headwinds in the shape of upcoming US elections, Europe's nascent second wave and the possibility of a disorderly Brexit.

### 8. Market Commentary

Despite a sharp setback during September, risk assets made further gains in the third quarter, building on the recovery which began in late March. Wall Street, particularly tech stocks and other clear beneficiaries of the pandemic, again led the way, with the S&P 500 returning 8.8% and the tech-heavy Nasdag index up over 12%. Chinese markets also performed strongly, the CSI 300 index up 10%, and this, together with a weak dollar, helped push emerging markets to a return of 9.6%, outpacing the MSCI index of developed markets, up 7.9%. European markets were weighed down by increasing concerns about a damaging second wave of coronavirus and rising anxiety about the Brexit discussions ahead of key deadlines in October; Europe ex UK returned only 1.4% in euro terms while the UK market fell 4.3% in GBP terms. The underperformance of the UK, which has also been held back by the dominance in the index of energy and financials, sectors which have been severely damaged by the impact of the pandemic, has been stark: so far this year the market is down 21% compared with a rise in the US of 5%. Increased risk appetite was reflected in fixed income markets; US Treasuries were flat, and the 2.5% return from the JPMorgan global government bond index came mainly from dollar weakness - the euro was up 4.3%, sterling +4.2% and yen +2.4%. Credit, on the other hand, performed well, notably high yield bonds +4.6%. A rise in inflation expectations from the extremely low levels seen in March supported US inflation protected bonds, +3.2%, as well as gold, +5.9%, which remains one of the best performing assets so far this year, +24%.

Driving markets were two key factors. First was the continuing economic recovery from the pandemic induced collapse in the early months of the year. This has been sharper than many predicted and has in turn resulted in corporate profits generally coming in ahead of expectations, although clearly not across all sectors. Second was the extraordinary support provided by the major central banks, which continue to purchase assets on a substantial scale while keeping interest rates close to or below zero, and provide guidance which points to a long period ahead of ultra-loose policy.

Foremost in this respect was the Fed and its review of the longer term goals of monetary policy, pointing to loose policy until it achieves its new target of inflation averaging 2% over time and longer term inflation expectations anchored at 2%. This provides the Fed with ample room to allow the economy to run hot for a period following years of sub 2% inflation. Combined with the signal that rates would remain near zero through 2023, while keeping QE, or asset purchases, at the current rate, investors have been provided with the near certainty of almost zero rates and substantial liquidity injections from the world's pre-eminent central bank for years ahead.

Developments on fiscal support programmes were more mixed. As the human cost of the pandemic continued to spread across the world, with extended first waves in parts of the US and in many developing countries, most notably Brazil and India, and rapidly developing second waves in Europe, the need for sustained and substantial fiscal support became increasingly urgent. But the longer term costs of such support presents tough choices for governments. The much-hailed EU Recovery Fund announced in July will not begin to distribute funds until next year and is already meeting some resistance from member states, leaving individual governments to extend fiscal packages to avoid the potential cliff edge as the furlough and similar earlier schemes end. In the US there is still no agreement

between the President and Congress on the fiscal stimulus package deemed necessary following the expiry of earlier support programmes. Figures of up to \$2tn, amounting to 10% of GDP, are under negotiation but are held up by political wrangling, compounded by the looming election.

Markets have been sensitive to these developments given the increasing urgency for additional support to prevent long term scarring and a slide into a sustained economic slump, but the issue in the US, and elsewhere across the developed world, is not whether further support should be forthcoming, but its size and composition. Nowhere are there serious suggestions of a return to post-GFC type fiscal austerity. While there had never been realistic expectations of a vaccine before covid second waves emerged, developments have been encouraging, with 7 vaccines now in stage 3 clinical trials. The front-runner appears to be the Oxford-Astra Zeneca drug, which can be produced cheaply in vast quantities and could be rolled out in a matter of months. This possibility, albeit with its attendant uncertainties, is not fully discounted in markets and would be a game-changer in terms of economic behaviour and investment opportunity.

With the economic fall-out from the pandemic persisting and probably deepening in the weeks ahead as second waves engulf Europe and elsewhere during the northern hemisphere winter, markets face a more challenging period ahead after the generally benign conditions of the past 6 months. The economic recovery underway could be stalled and longer term scarring is a real threat to growth. Additional uncertainty surrounds the US Presidential election; investor concern is less about who wins (although Biden is likely to be less market friendly because of his high tax, high spending instincts), and more about what happens if the result is disputed. This might well result in bouts of volatility in markets, but should be resolved in a relatively short period of time – the constitution and rule of law will prevail. The other immediate concern for markets is the EU-UK Brexit negotiation; as we approach critical deadlines ahead of the end of the transition period there are fears that a deal will not be struck, leaving the UK to trade with the EU on WTO terms from 1st January 2021. Since this is plainly in neither side's interests the political pressures to compromise over the few remaining outstanding issues will intensify, and the most likely outcome appears to be an 11th hour deal in classic EU style. In the meantime, however, the uncertainty adds to investor unease.

In the face of these short term uncertainties, markets could well experience higher levels of volatility in the weeks ahead. However, 2021 promises to be a year of strong recovery, and risk assets will have continuing support from ultra-loose monetary policy as well as additional fiscal stimulus across much of the developed world. Furthermore, markets are still not discounting the roll-out of a vaccine; any good news on this front would be a major boost to confidence and sentiment and might well herald a period of significant outperformance by value stocks over growth. We therefore expect markets to move higher through 2021 and would use setbacks in the months ahead as a buying opportunity.

#### Important notes

Collective investments are generally medium to long-term investments. The value of units may go down as well as up and past performance is not necessarily a guide to the future.

Collective investments are traded at ruling prices. Commission and incentives may be paid and, if so, would be included in the overall costs. All performance is calculated on a total return basis, after deduction of all fees and commissions and in US dollar terms. Forward pricing is used.

The Fund invests in other collective investments, which levy their own charges. This could result in a higher fee structure for the Fund.

Fluctuations in the value of the underlying funds, the income from them and changes in interest rates mean that the value of the Fund and any income arising from it may fall, as well as rise, and is not guaranteed.

Deductions of charges and expenses mean that you may not get back the amount you invested.

The fees charged within the Fund and by the managers of the underlying funds are not guaranteed and may change in the future.

Higher risk investments may be subject to sudden and larger falls in value in comparison to other investments. Higher risk investments include, but are not limited to, investments in smaller companies, even in developed markets, investments in emerging markets or single country debt or equity funds and investments in high yield or non-investment grade debt.

Notwithstanding ongoing monitoring of the underlying funds within the Fund, there can be no assurance that the performance of the funds will achieve their stated objectives.

The Fund will contain shares or units in underlying funds that invest internationally. The value of an investor's investment and the income arising from it will therefore be subject to exchange rate fluctuations.

Foreign securities may have additional material risks, depending on the specific risks affecting that country, such as: potential constraints on liquidity and the repatriation of funds; macroeconomic risks; political risks; foreign exchange risks; tax risks; settlement risks; and potential limitations on the availability of market information.

The Fund may contain shares or units in underlying funds that do not permit dealing every day. Investments in such funds will only be realisable on their dealing days. It is not possible to assess the proper market price of these investments other than on the fund's dealing days.

No borrowing will be undertaken by the Fund except for the purpose of meeting short term liquidity requirements. Borrowings will not exceed 10% of the net asset value of the Fund. For such purpose, the securities of the Fund may be pledged. No scrip borrowing will be allowed.

While derivative instruments may be used for hedging purposes, the risk remains that the relevant instrument may not necessarily fully correlate to the investments in the Fund and accordingly not fully reflect changes in the value of the investment, giving rise to potential net losses.

Forward contracts are neither traded on exchanges nor standardised. Principals dealing in these markets are also not required to make markets in the currencies they trade, with the result that these markets may experience periods of illiquidity. Banks and dealers will normally act as principals and usually each transaction is negotiated on an individual basis.

The Manager has the right to close the Fund to new investors, in order to manage it more efficiently, in accordance with its mandate.

Investment in the Fund may not be suitable for all investors. Investors should obtain advice from their financial adviser before proceeding with an investment.

Investors are reminded that any forecasts and/or commentary included in this MDD are not guaranteed to occur, and merely reflect the interpretation of the public information and propriety research available to the Investment Manager at a particular point in time.

This report should be read in conjunction with the prospectus of Momentum Mutual Fund ICC Limited and the supplement, in which all the current fees and fund facts are disclosed.

Copies of these scheme particulars, including the Prospectus, Fund Supplement, and the annual accounts of the Scheme, which provide additional information, are available, free of charge, upon request from Momentum Wealth International Limited, La Plaiderie House, La Plaiderie, St Peter Port, Guernsey, GY1 1WF, Telephone 0044 1481 735480, or from our website www.momentum.co.gg.

This report should not be construed as an investment advertisement, or investment advice or guidance or proposal or recommendation in any form whatsoever, whether relating to the Fund or its underlying investments. It is for information purposes only and has been prepared and is made available for the benefit of the investors in the Fund.

While all care has been taken by the Investment Manager in the preparation of the information contained in this report, neither the Manager nor Investment Manager make any representations

or give any warranties as to the correctness, accuracy or completeness of the information, nor does either the Manager or Investment Manager assume liability or responsibility for any losses arising from errors or omissions in the information.

Momentum Mutual Fund ICC Limited is an incorporated cell company governed by the provisions of the Companies (Guernsey) Law 2008 as amended.
